COVID-19 & Antibody-Dependent Enhancement (ADE)

.....

What Is Antibody Dependent Enhancement (ADE) / Pathogenic Priming?

- *Antibody Dependent Enhancement (ADE) can make vaccinated people more susceptible to serious infection from the virus*
- *With ADE, after people get vaccinated for an initial virus, infection by a subsequent variant or strain of the virus can result in “increased viral replication and more severe disease, leading to major safety risks”*
- *ADE can also “occur when neutralizing antibodies (which bind the virus and stop it from causing infection) are present at low enough levels that they don’t protect against infection. Instead, they can form immune complexes with viral particles, which in turn leads to worse illness”*
- *This concern was initially described by some scientists who were subsequently banned from media platforms that incorrectly claimed the scientists were disseminating disinformation*

“My extreme confidence in [the] effectiveness of vaccines was misplaced,” said Ziegler on Twitter. “It was based largely on how well they performed initially in Israel, which is nearly fully vaccinated. The recent data there is horrible with even deaths now picking up.”

“But no clinical trial data shows a third dose will reduce infections, much less hospitalizations or deaths. And a research preprint released Monday (Aug. 23) in Japan suggests the Delta variant could evolve in a way that could produce vaccine antibody-dependent enhancement, a nightmare scenario.”

“The Most Vulnerable Population Are The Ones Who Received Two Vaccine Doses”

Israeli Prime Minister Naftali Bennett:

“The most vulnerable population at the moment, in a paradoxical manner, are the ones who received two vaccine doses, but not the third dose. Why? Because they walk around feeling like they are protected because they received both doses. They do not understand that the second vaccine has faded against the Delta [Variant] and must get quickly vaccinated with the third vaccine dose. Therefore, each of us, including members of Knesset Gilad Kariv and Itlama Ben-Gvir who are both young. There are many young people (vaccinated) who are seriously ill, including hospitalizations. These ages are the most vulnerable. Because someone who didn’t get vaccinated is aware of it for a year and a half... He is probably sitting in a closed room or something.”

- [Fully Vaccinated Healthcare Workers Carry 251 Times Viral Load, Pose Threat To Unvaccinated Patients, Co-Workers](#) (The Defender – 08/23/21)

A groundbreaking preprint paper by the prestigious Oxford University Clinical Research Group, published Aug. 10 in The Lancet, includes alarming findings devastating to the COVID vaccine rollout. The study found vaccinated individuals carry 251 times the load of COVID-19 viruses in their nostrils compared to the unvaccinated. While moderating the symptoms of infection, the jab allows vaccinated individuals to carry unusually high viral loads without becoming ill at first, potentially transforming them into presymptomatic superspreaders. This phenomenon may be the source of the shocking post-vaccination surges in heavily vaccinated populations globally.

- [Government ‘Flying Blind’ On Breakthrough Infections, As Covid Infections Among Fully Vaccinated Soar](#) (The Defender – 08/23/21)

As spring turned to summer, scattered reports surfaced of clusters of vaccinated people testing positive for the coronavirus. In May, eight vaccinated members of the New York Yankees tested positive. In

June, 11 employees of a Las Vegas hospital became infected, eight of whom were fully vaccinated. And then 469 people who visited the Provincetown, Massachusetts, area between July 3 and July 17 became infected even though 74% of them were fully vaccinated, according to the CDC's Morbidity and Mortality Weekly Report.

- [The Vaccinated Are Worried And Scientists Don't Have Answers](#) (Bloomberg – 08/21/21)

Anecdotes tell us what the data can't: Vaccinated people appear to be getting the coronavirus at a surprisingly high rate. But exactly how often isn't clear, nor is it certain how likely they are to spread the virus to others. And now, there's growing concern that vaccinated people may be more vulnerable to serious illness than previously thought.

"Protection Against Severe Infection, Hospitalization, And Death Could Decrease..."

CDC Director Dr. Rochelle Walensky:

"The data we will publish today and next week demonstrate the vaccine effectiveness against SARS-CoV-2 infection is waning. And even though our vaccines are currently working well to prevent hospitalizations, we are seeing concerning evidence of waning vaccine effectiveness over time and against the Delta variant.

"Additionally, reports from our international colleagues, including Israel, suggest increased risk of severe disease amongst those vaccinated early. Given this body of evidence, we are concerned that the current strong protection against severe infection, hospitalization, and death could decrease in the months ahead, especially among those who are at higher risk or who were vaccinated earlier during the phases of our vaccination rollout."

"Vaccinated People Are At Risk; Should Be Put In Quarantine..."

Professor Christian Perronne, MD, PhD:

Vaccinated people are at risk of the new variants. In transmission, it's been proven now in several countries that vaccinated people should be put in quarantine and isolated from society. Unvaccinated people are not dangerous; vaccinated people are dangerous to others. That's been proven in Israel now, where I'm in contact with many physicians. They're having big problems in Israel now: severe cases in hospitals are among vaccinated people. And in the UK also, you had a larger vaccination programme and there are problems [there] also.

But also, the "variants" are not very dangerous. All the "variants" since last year are less and less virulent. That's always the story in infectious diseases. In my hospital, in March-April 2020, the whole building was full of people with Covid-19: fifty patients. And the so-called "second", "third", "fourth waves" were just very small waves, because the hospitals are not full any more. But in the media, they said that all the hospitals were full of patients. That's not true. Of course, the epidemic was going on, but the "variants" were less and less virulent . . . Yet now, you have governments obliging their citizens to be inoculated with these so-called "vaccines" — and in the countries where they did that, once the

epidemic was [already] finished, the epidemic came back, and deaths started again.

.....

I think that the databases [of adverse effects] in some countries are not accurate, because in these cases that I could see, I know that the general practitioners [family doctors] did not want to report the death or the side effect to the authorities, saying, “No, it’s just a coincidence!” So, many, many side effects are not being reported. If there is a stroke, they say, “Oh no, it’s not the vaccine; it’s [just] a stroke; this person was old, so it’s normal to have a stroke.”

Because I speak with my patients (I have some patients who are high-level directors of companies), I know — they tell me — that the physicians in the big companies where many employees were “vaccinated” had problems, but the occupational health doctors didn’t want to report the cases to the French authority. So it’s not being connected with the “vaccine”; it’s [being put down as] “coincidence”.

If we compare the French database with the Dutch database, with the same proportion of patients vaccinated [in both populations], the rate of reporting is much lower in France. That’s not normal! But if we then look at the European level, we see that there are huge numbers of deaths and serious side effects.

We know — it’s officially acknowledged by the CDC, the Centers for Disease Control in the United States — that many young people who are “vaccinated” have had heart problems: myocarditis, inflammation of the cardiac muscle, or pericarditis, inflammation of the envelope around the heart. So that’s official; it’s reported worldwide . . . As we know, children don’t develop the disease [Covid-19] at a high rate, and very few children have had severe cases, and the rate of [Covid] death in children is near zero. We now know that the risk of death and of severe problems is much higher if you are vaccinated than not vaccinated [as a child].

And now, we see in some countries that most of the problems, of the cases, are coming from vaccinated people, who are transmitting the disease. And of course, this is not official language, but in France, the government lies: they say, “Although we have seen some cases, it is the fault of the unvaccinated for contaminating the vaccinated.”

I’m a Fellow of the Louis Pasteur Institute; I’ve worked in the field of vaccination for years and years. This is the first time in my life that I’ve heard from companies, from the manufacturers, from the ministers, from the WHO [such talk]: “It’s a very good vaccine — but we have to tell you that if you are vaccinated, you can get the disease anyway! And we’re not sure, but it may slow the transmission.”

This is not normal. If you are vaccinated with an efficient vaccine, you are protected. You should not have to wear a mask any more; you should have a normal life. But in fact, in many countries, they say, “Oh, you’ve been vaccinated, but you’re not really protected.” And now they say to the vaccinated — who are supposed to be protected, who should have confidence! — “Oh, the unvaccinated will contaminate you!”

Now, as regards the “health passport”: you know that they published [this proposal] five weeks ago in Israel, and they were close to civil war in Israel. They were fighting inside families. The “vaccine” was mandatory for physicians, for students. And now, they’ve stopped that [requirement].

In France now, President Macron will speak tomorrow evening, and is expected to say [as he duly did] that vaccination will be mandatory for health care workers, health providers and to participate in some [aspects of] public life. I think this is a great scandal, and I think there will be a civil war if we go this way.

Herzog Hospital In Jerusalem: 85-90% Of Hospitalizations Are Fully Vaccinated People

.....

- [Most Covid Patients At Israeli Hospital Fully Vaccinated](#) (Spectator – 08/11/21)

In the interview on August 5 with Israel's Chanel 13, Dr Kobi Haviv, medical director of Herzog Hospital in Jerusalem, stated that the majority of coronavirus patients in an Israeli hospital are fully vaccinated, including those with severe disease. Dr. Haviv further specified that: "95% of the severe patients are vaccinated," adding "85-90% of the hospitalizations are in fully vaccinated people" and the hospital is "opening more and more COVID wards."

- [Bombshell Leak: Countries That Buy Pfizer's Vaccine Undertake To Break The Law](#) (Free West Media – 08/08/21)

On July 28, NBC Chicago reported that 169 people in Illinois died and 644 were hospitalized for Covid-19. Everyone was fully vaccinated. Israel with 9.3 million inhabitants was among the first to sign an agreement with Pfizer. The vaccination rate in the country is 55 percent, and 11,051,469 vaccine doses have been distributed. On June 30, the alarming news broke that fully vaccinated patients accounted for half of Covid adults hospitalized in Israel. In just over a month, the numbers have increased dramatically. Even from Iceland, which has a vaccination rate of as much as 71.1 percent, there are worrying reports that the majority of hospitalized Covid-19s have been fully vaccinated. Vaccines that have been presented as "safe" and painted as the only salvation in the pandemic, have turned out to be the opposite.

- [Latest Public Health England Report Shows The Covid-19 Vaccines Are Increasing The Risk Of Hospitalisation And Death Due To Covid-19 Significantly](#) (The Daily Expose – 08/07/21)

The latest Public Health England technical briefing on Covid-19 variants of concern has been published and it reveals that up to the 2nd August 2021, 65% of all alleged Covid-19 deaths since February 2021 have been people who were vaccinated against the disease. The report, which is the 20th update to be released, also shows that the risk of hospitalisation and death is astronomically higher if you have been fully vaccinated and catch the SARS-CoV-2 virus.

- [Coronavirus: Who Are Israel's Seriously Ill Patients?](#) (The Jerusalem Post – 08/05/21)

As of Thursday morning, there were some 250 COVID-19 patients in serious condition. What are their ages and what is their vaccination status? About 210 of them are individuals over the age of 60. Of those, 153 were fully vaccinated, seven were in the process of getting fully immunized and 50 were not vaccinated. Of the 40 patients in serious condition aged under 60, however, only nine were fully inoculated, one was partially vaccinated and 30 had not received any vaccine. Currently, there are no patients in Israel under the age of 30 who are in serious condition.

- [Israel: Early Jab Recipients Twice As Likely To Catch Covid](#) (Free West Media – 08/05/21)

Israelis who were vaccinated before late February are twice as likely to catch the Coronavirus than those who received the shot later, according to new research. The data suggests that the vaccinated have now involuntarily signed up for a lifetime of "booster" shots if they survive the vaccine.

- [Signs Of COVID Injection Failure Mount](#) (GreenMedInfo – 08/02/21)

In the U.K., symptomatic COVID-19 cases among "vaccinated" individuals have risen 40% in one week, reaching an average rate of 15,537 new infections a day being detected. Meanwhile, symptomatic COVID-19 cases among the unvaccinated has declined by 22% and is now at a current daily average of 17,588. This suggests the wave among unvaccinated has peaked and that natural herd immunity has set in, while "vaccinated" individuals are actually becoming more prone to infection.

Data show countries with the highest COVID injection rates are also experiencing the greatest upsurges in cases, while countries with the lowest injection rates have the lowest caseloads.

Genocide Alert

From Dr. Vladimir Zev Zelenko

August 5, 2021

Source: [Vladimir Zev Zelenko’s Telegram Channel](#)

- New data shows the viral titers are higher in vaccinated victims than in unvaccinated people.
- This may mean the feared ADE ([antibody dependent enhancement](#)) has started. This is the worst nightmare scenario and fear of Dr. Luc Montaguier, Dr. Michael Yeadon, Dr. Delores Cahill, Dr. Sucharit Bhakdi, Dr. Richard Malone, Dr. Joseph Mercola, and myself.
- This poses the greatest risk of genocide to the human race in the history of humanity.
- If you are vaccinated then consider yourself at higher risk to die from ADE than a 95 year old nursing home resident.

Potential Strategy for not succumbing to ADE:

- Immediately stop getting poison death vaccine injections.
- Consider yourself at the highest risk and immediately start the high risk antiviral prophylaxis protocols.
- High risk antiviral prophylaxis includes: zinc, vitamin c, vitamin d3, ivermectin or hydroxychloroquine.
- Quercetin or EGCG are most likely not strong enough to protect you.
- This means z-stack is insufficient for high risk patients and should not be used as a stand alone.
- Stop listening to mainstream media and the recommendations of the CBC, NIH, FDA, WHO, and the Biden administration. They are the enemy of the people.
- It is time for God-centered humanity to intensify peaceful worldwide protests against tyranny.
- Do not use violence. Be aware of your constitutional rights especially the legality of stand-your-ground laws.
- Immediately arrest the sociopathic masterminds of this attempted conspiracy of genocide and enslavement of humanity. They must be brought to legal justice.

On a personal note, I want to express my deepest soulful love for my wife, children, parents, brother, friends, and all those warriors that have risked everything to help save humanity from devolved pagans.

I strongly believe that we are on the cusp of a global redemptive transformation that will usher in the revelation of the essence of God.

God bless you all.
